
NYC 311 Analysis 2016-2020

Background

- 311 is a number where citizens can request non-emergency municipal services in many American cities
 - NYC has made 311 request data open and accessible in the last 10 years
 - Massive size of the 2016-2020 dataset (Over 10 million rows!) makes it a rich source of information on the problems and habits of NYC's population and the effectiveness of its public services
-

Problem Statement

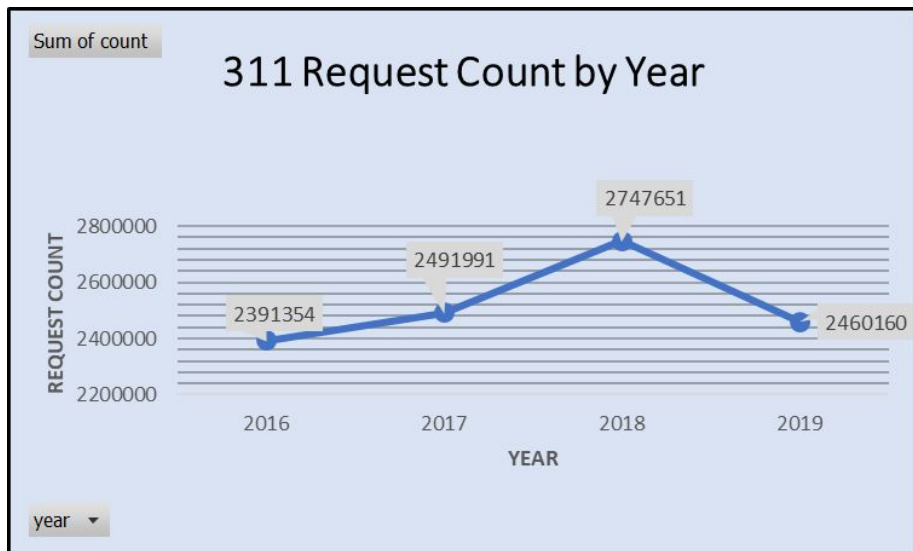

Goal: Determine how NYC can improve its services by cutting down on the time to close of 311 requests

Method: Examine trends in the data based on time, request type, responding agency, location etc. to identify areas to focus on

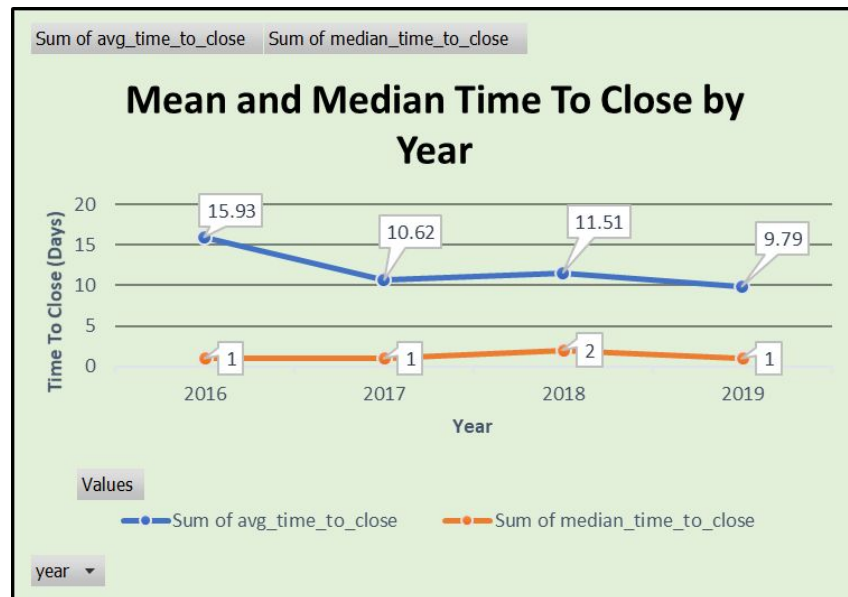

Assumptions: Time to close can be shortened for most 311 requests, negative time to close impossible

Audience: Residents, policy makers

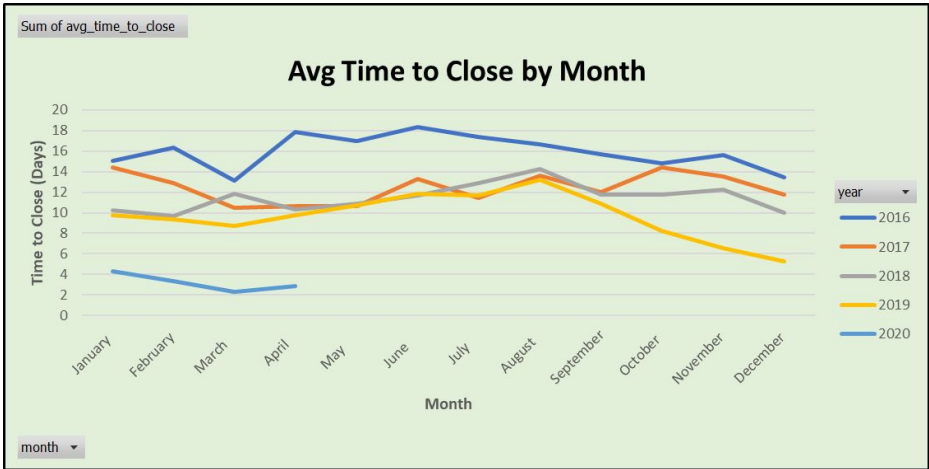

Year

4 year avg request count 2522789

4-year avg time to close	11.96
4-year median time to close	1

Conclusions and Recommendations

- Time to close has generally decreased since 2016
 - Higher volume of requests doesn't always mean higher time to close
 - Specialty requests (planting trees, investigations) take longer
-
- Focus on promotion of mobile app and online resources
 - Deadline for request closure or update on the status based on request type
-

Further Analysis

- More granular geospatial analysis based on latitude and longitude data
 - Metric to assess citizen satisfaction with 311 request service
 - Separate analysis for noise complaints and heat/hot water because they constituted such a large number of requests
